CCFP Approved Formula List*

- *If formula is served to infants 13 months of age and older, a medical statement is required for reimbursement.
- * Please note breast milk is encouraged and reimbursable until any age the mother/child are ready to be weaned.

In order to approve an Infant Formula, it must meet the following three criteria:

- 1. Infant formula must be iron-fortified. This means it contains at least 1 milligram (mg) iron per 100 kilocalorie (calorie) serving, when prepared in accordance with label directions.
- 2. Infant formula must be regulated by and meet the nutrient specifications set by the FDA. This means that formula purchased outside the U.S., is not likely to be regulated by the FDA and is therefore not creditable.
- 3. Infant formula must not be found on the "FDA Exempt Infant Formula List". If found on this list, the formula will only be allowed with a medical statement signed by a licensed physician.

The following iron-fortified infant formulas are approved and do not require a medical statement.

Infant Formulas
